

Dr. J. Andrew Jones  
Assistant Professor in Chemical, Paper, and Biomedical Engineering  
Miami University  
Oxford, OH

Friday 11/17/17

Where: SSOE Seminar Room, 1027 Nitschke Hall

Time: 11:30 am - 12:30 pm

Fermentation-based chemical production strategies provide a feasible route for the rapid, safe, and sustainable production of a wide variety of important chemical products, ranging from fuels to pharmaceuticals. Currently, these strategies have not obtained wide industrial utilization due to their inability to economically compete with traditional extraction and chemical production methods.
