COURSE DESCRIPTION

Limits of sequences and functions, derivatives, Mean Value Theorem, curve sketching, de nite and inde nite integral, Fundamental Theorem of Calculus. Of interest to students requiring a conceptual understanding of calculus. Not for major credit.

STUDENT LEARNING OUTCOMES

The successful Calculus I student should be able to apply the following competencies to a wide range of functions, including piecewise, polynomial, rational, algebraic, trigonometric, inverse trigonometric, exponential and logarithmic:

Limits: Determine the existence of, estimate numerically and graphically and nd algebraically the limits of functions. Recognize and determine in nite limits and limits at in nity and interpret them with respect to asymptotic behavior.

Continuity: Determine the continuity of functions at a point or on intervals and to distinguish between the types of discontinuities at a point.

Derivatives: Determine the derivative of a function using the limit de nition and derivative theorems. Interpret the derivative as the slope of a tangent line to a graph, the slope of a graph at a point, and the rate of change of a dependent variable with respect to an independent variable.

Indeterminate Forms: Evaluate limits that result in indeterminate forms, including the application of L'Hopital's Rule.

Higher Order Derivatives: Determine the derivative and higher order derivatives of a function explicitly and implicitly and solve related rates problems.

Graph Sketching: Determine absolute extrema on a closed interval for continuous functions and use the rst and second derivatives to analyze and sketch the graph of a function, including determining intervals on which the graph is increasing, decreasing, constant, concave up or concave down and nding any relative extrema or in ection points. Appropriately use these techniques to solve optimization problems.

Antiderivatives: Determine antiderivatives, inde nite and de nite integrals, use de nite integrals to nd

UNIVERSITY POLICIES:

POLICY STATEMENT ON NON-DISCRIMINATION ON THE BASIS OF DISABILITY (ADA) The University is an equal opportunity educational institution. Please read The University's Policy Statement on Nondiscrimination on the Basis of Disability Americans with Disability Act Compliance.

ACADEMIC ACCOMMODATIONS

The University of Toledo is committed to providing equal access to education for all students. If you have a documented disability or you believe you have a disability and would like information regarding academic accommodations/adjustments in this course please contact the Student Disability Services O ce (Rocket Hall 1820; 419.530.4981; studentdisabilitysvs@utoledo.edu) as soon as possible for more information and/or to initiate the process for accessing academic accommodations. For the full policy see: http://www.utoledo.edu/offices/student-di sability-services/sam/i ndex.html

ACADEMIC POLICIES:

STUDENT PRIVACY

Federal law and university policy prohibits instructors from discussing a student's grades or class performance with anyone outside of university faculty/sta without the student's written and signed consent. This includes parents and spouses. For details, see the Con dentiality of Student Records (FERPA) section of the University Policy Page at http://www.utol.edu.edu/policies/academic/undergraduate/index.html

MISSED CLASS POLICY

If circumstances occur in accordance with The University of Toledo Missed Class Policy (found at http://www. utol edo. edu/pol i ci es/academi c/undergraduate/i ndex. html) result in a student missing a quiz, test, exam or other graded item, the student must contact the instructor in advance by phone, e-mail or in person, provide o cial documentation to back up his or her absence, and arrange to make up the missed item as soon as possible.

ACADEMIC DISHONESTY

Any act of academic dishonesty as de ned by the University of Toledo policy on academic dishonesty (found at http://www.utoledo.edu/dl/students/dishonesty.html) will result in an F in the course or an F on the item in question, subject to the determination of the instructor. Please note that any use of, or visibility of, a cell phone or smart watch (or any other device capable of connecting to the internet or storing information, or anything not approved by the instructor) during a test, quiz or exam will be considered academic dishonesty.

GRADING AND EVALUATION

Your syllabus should describe the methods of evaluation, whether by quizzes, exams or graded assignments. (There should be at least two one-hour in-class exams. If quiz scores are not included in the nal grade computation, there should be three one-hour exams.) If a grading scale is used, it should be clearly stated. A statement of the proportion that each evaluation component contributes toward the nal grade should also be included. A sample reasonable distribution for this class would be:

Component	points
Homework and/or Quizzes	30%
Midterm Exams	40%
Final Exam	30%

In scheduling quizzes and exams, it should be kept in mind that the last day to add/drop the class is the end of the second week of classes and the last day to withdraw is the end of the tenth week. By these dates, students should have su cient data to realistically gauge their progress in the class.

For program assessment purposes, each semester a committee of all Calculus I instructors will prepare a set of six common exam questions to appear on the nal exams of all sections of the course.

Information about the algebra and trigonometry placement (including practice tests) may be found on the Math Department website at http://www.math.utoledo.edu/placement_index.html

Peculiarity of this class compared to the standard Math 1850 Calculus I: Math 1830, Calculus I for Mathematicians, Scientists and Educators, is a trigonometry based calculus course that has the special objective of

training students in the more rigorous aspects of calculus. Although the course will have the same expectations as Math 1850 for students acquisition of the algorithmic skills of calculus, more time will be spent in developing students appreciation for the foundational ideas of calculus with the expectation that their understanding will develop to the extent that they can use these ideas in problem solving. For this reason, student projects are considered to be an important component of the course. In order to give time so that students can concentrate on understanding the concepts of calculus, some materials, such as related rates, linear approximations, optimization problems could be moved to students' projects. Please keep in mind however, that related rates and optimization problems are compulsory topics according to the Ohio Transfer Modules Agreement.

To present some fundamental ideas in Calculus the instructor might choose to emphasize the notion of convergence (together with the precise de nition of limits) or the notion of asymptotic approximation (for instance via Taylor polynomials and via the Landau's notation of o(x) and O(x)) and how it can be used to solve many problems.

IMPORTANT DATES

The instructor reserves the right to change the content of the course material if he perceives a need due to postponement of class caused by inclement weather, instructor illness, etc., or due to the pace of the course.

MIDTERM EXAM: FINAL EXAM:

OTHER DATES:

The last day to drop this course is: The last day to withdraw with a grade of W from this course is:

STUDENT SUPPORT SERVICES

Students should be made aware of the tutoring help available during each week of the semester in the Mathematics Learning and Resource Center, located in Rm B0200 in the lower level of Carlson Library (phone ext 2176). The center operates on a walk-in basis. MLRC hours can be found at http://www.math.utol.edo.edu/mlrc/MLRC.pdf.
